MealSuite

CULINARY SERVICES GROUP

The Right Menu Planning Software for Our Clients

Culinary Services Group specializes in healthcare dining, and we've partnered with a menu planning software company that understands our client's unique operational needs. MealSuite is a menu planning software designed specifically for long-term care, senior living, and acute care hospitals, making it the perfect SAAS partner for us.

Customizable Menus

With MealSuite, you will benefit from customizable menus that are unique to your community while always being inclusive of special diets and texture modifications. The software allows you to track resident likes, dislikes, allergens, and diet orders to ensure the right meal is delivered to the right person every time. Enjoy peace of mind with MealSuite too! The software makes it easy to meet HIPPA requirements, implement HACCP Controls, and output compliant Nutrition Reports. MealSuite's state-of-the-art ordering software simplifies bedside ordering, allowing for in-room selection on tablets and even room service at small locations.

EMR Intergration

Mealsuite is a fully integrated solution that works with your other providers. With Mealsuite Connect diet order, allergy and admission, discharge, and transfer data can move seamlessly from your EMR system directly into MealSuite's dietary and food production system in real-time. Your clinical nutrition teams will always have the most current care data at their fingertips. MealSuite Connect works with most EMR systems.

Training & Support

Culinary Services Group ensures all new communities are well-trained in Mealsuite and supported through peer experts and corporate support. Our implementation includes 6 weeks of hands-on MealSuite training for dietary staff and resource guides for new tickets and production reports. Our corporate team will also provide assistance to set up individualized customization for the community and residents.
